ABOUT US

We are a group of bike riders and a family firm of engineers. We ride bikes and we know what's the best product for the riders. We have more than ten years of experience on the CNC machine works and enriched our knowledge of the material, we know what is most strong, light and stable material for the Bike Parts. Most of our products are made of strong alloy, carbon and the worldwide well-known plastic raw materials from Swiss.

All of our products are made in Taiwan, that's because we know the quality issue is the most important for all customers, because of our great passion on the bike products, we just have a desire to be a world-class supplier, to develop and fabricate the best bicycle components.

Most progressive design For wind resistance concern, we designed the frame to hide the brake at the rear of the fork and under the Bottom Bracket.

The 1-1/8 ~ 1-1/2 head tube can be handling easier & efficiently promote the stiffness of the frame. And, extra big on Bottom Bracket and seat tube to get better stiff than the traditional frames. To look for a low wind resistance and high stiff frame, this is the best choice.

Parts include:

- Brake
- Seat clamp
- Headset

STEM

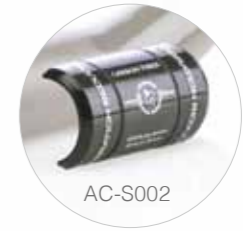

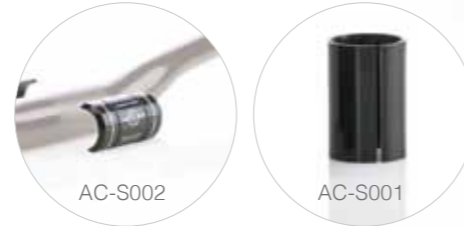

SM-RA001

Full CNC made, unique light weight.
Alloy 6066 material effectively enhance the overall strength and improve hard to stress corrosion.
Bar bore size upgrade to Ø35mm conget more siffness with Ø35mm handlebar.
80-140Mm lenght, 7 size can choice.
Has been approved by EN test standards.

Product Features:

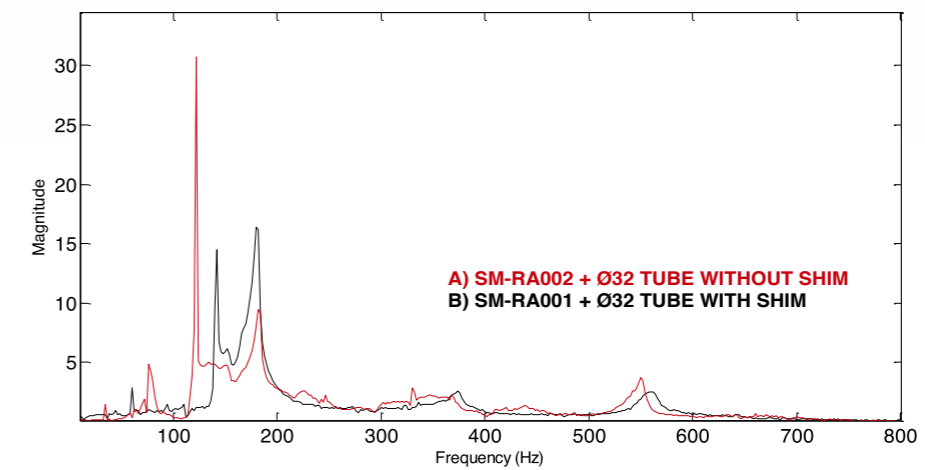

- Material: Alloy 6066-T6
- Spec: 80~140mm
- Angle: ±8 degree
- Fork stack hight 40mm fork tube 31.8mm
- Handlebar clamp 35mm

- Weight: 80mm/131g

FRF (Frequency Response Function) Experimental Results:

Results: The stem without shim has a resonant peak as high as 31 in magnitude at 122 Hz. Whereas the stem with shim has a resonant peak of only 15 in magnitude at 140 Hz. The result indicates that the stem with shim will have smaller vibration amplitudes.

Time Waveform Chart Experimental Results:

Results: Initially, the amplitudes of the waveforms of both stems are almost the same. However, the amplitude of the stem with shim decays faster. After 0.05 seconds, the amplitude of the stem with shim is smaller than that of the stem without shim.

DOWNHILL STEM

SM-MB003

Full CNC made, unique light weight.
Bar bore size upgrade to Ø35mm can get more stiffness with Ø35mm handlebar.

To fix the downhill fork.

Has been approved by EN test standards.

Product Features:

- Material: Alloy 6061-T6
- Offset height: 25mm
- Direct mount: boxxer
- Handlebar clamp 35mm

RACING HANDLEBARS

HB-RA001 **31.8** CARBON

One piece monocoque construction.
Passed safety test.
Fluid mechanics design on bar top to reduce drag / increase the hand-hold area.
Lower bar area to use anatomic ratio design for sprint position.

Product Features:

- Material: Carbon fiber
- Spec: 31.8mm x W400, 420, 440mm (c-c)
- Drop: 130mm
- Reach: 80mm
- Bar type: anatomic-bend
- Weight: 216g (W420mm)

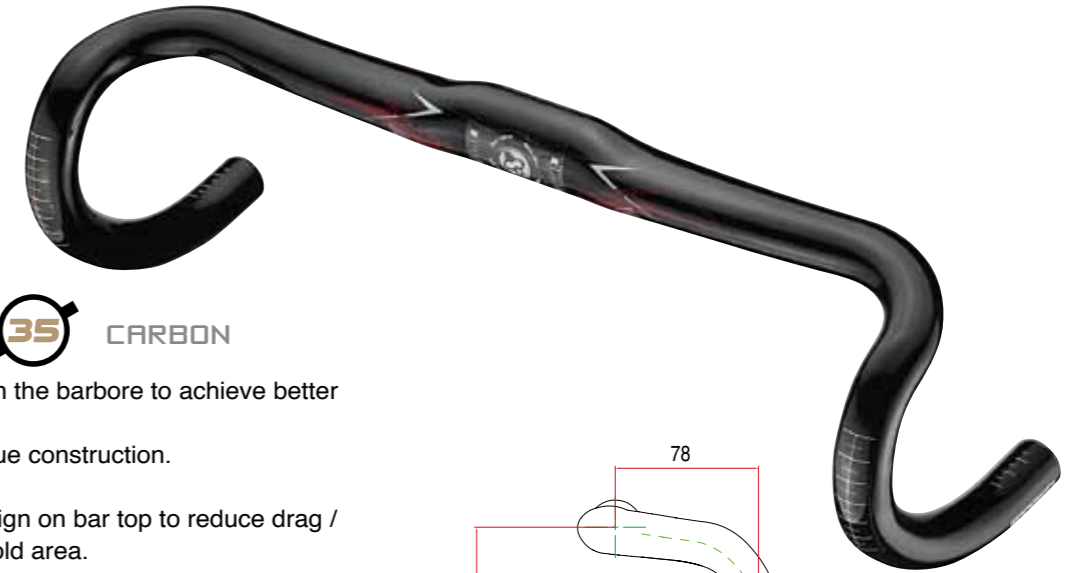

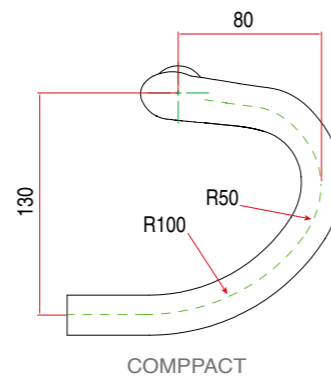

HB-RA002 **31.8** CARBON

One piece monocoque construction.
Passed safety test.
Ergonomic design for more comfortable.
Lower bar area to use compact ratio design for sprint position.

Product Features:

- Material: Carbon fiber
- Spec: 31.8mm x W400, 420, 440mm (c-c)
- Drop: 130mm
- Reach: 80mm
- Bar type: compact
- Weight: 216g (W420mm)

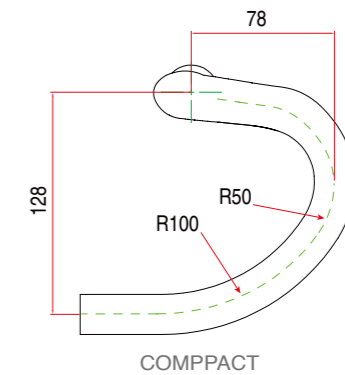

HB-RA003 **35** CARBON

Extra big diameter on the bar bore to achieve better strength.
One piece monocoque construction.
Passed safety test.
Fluid mechanics design on bar top to reduce drag / increase the hand-hold area.
Lower bar area to use compression ratio design for multiple hand-hold position.

Product Features:

- Material: Carbon fiber
- Spec: 35mm x W400, 420, 440mm (c-c)
- Drop: 128mm
- Reach: 78mm
- Bar type: compact
- Weight: 225g (W420mm)

HB-MB001 35 CARBON

One piece monocoque construction. Enlarge diameter at stem clamping area to get better strength. Extra width can efficiently increase stability control. Can adjust the width to min 660mm. Passed safety test.

- Product Features:
- Material: Carbon fiber
 - Spec: 35mm x W780mm
 - Rise: 20mm
 - Back sweep: 9 degree
 - Up sweep: 5 degree

HB-MB007 31.8 ALLOY

Made of Alloy 6066 material and hydroforming, can increase strength and decrease the risk of stress corrosion. **Eccentric design to adjust the angle +/-5mm.** Passed safety test.

- Product Features:
- Material: Alloy 6066-T6
 - Spec: 31.8mm x W720mm
 - **Eccentric: 5mm**
 - Back sweep: 9 degree
 - Weight: 235g

HB-MB008 31.8 CARBON

The best 9 degree bend angle design to make you more comfortable on ride. Advanced material effectively absorb the uneven road surface vibration. Eccentric design can change height of 5mm to reduce the height of handlebar, it's the best choice to make your bike more light on riding. Passed safety test.

- Product Features:
- Material: Carbon fiber
 - Spec: Ø31.8mm x W750mm
 - **Eccentric: 5mm**
 - Back sweep: 9 degree

SUPER LIGHT CALIPER BRAKE

Single-axis design to reduce the weight of whole brake set.
With ti-64 titanium screws.
Ball bearings in brake pivot.
Alloy 6066 material effectively enhance the overall strength
and improve hard to stress corrosion.

ROAD BRAKE

BR-DX001 Titanium Axle

The use of leverage increases the braking force and the single-axis design to reduce the weight of whole brake set. Alloy 6066 material effectively enhance the overall strength and improve hard to stress corrosion, the weight of whole brake set is being improved to collocate with ti-64 titanium screws. Full CNC manufacturing comes out perfect appearance and good mating of tolerance. Collocate with the swiss stop brake shoes. Approved by CEN test standards.

Product Features:

- Material: Alloy 6066-T6 CNC made
- Brake shoes: CNC cassette
- Bolt: main bolt ti-64
- Dimension: c-c 39-51mm
- Option: swiss stop carbon rim pads available
- Color: polish anodize
- Weight: 210g/set

BR-S003

The use of leverage increases the braking force and the single-axis design to reduce the weight of whole brake set. Alloy 6066 material effectively enhance the overall strength and improve hard to stress corrosion, the weight of whole brake set is being improved to collocate with Cr-Mo screws. Full CNC manufacturing comes out perfect appearance and good mating of tolerance. Approved by CEN test standards.

Product Features:

- Material: Alloy 6066-T6 forged cnc made
- Brake shoes: Forged cassette
- Bolt: main bolt Cr-Mo
